

Award for Berger Paints at Rail Analysis Innovation & Excellence Summit 2023

We are grateful to Rail Analysis for inviting us to their 4th Innovation & Excellence Summit 2023 in New Delhi, and for bestowing the prestigious award in recognition of our contribution to Indian Railway for providing innovative solutions in the sector of cleaning, painting, and coating of coaches. The continued innovation and upgradation of the painting system offered by Berger Paints resulted in an excellent performance in terms of durability and extended life which helped Railways in the reduction of frequency of the painting cycle resulting in sizable savings for the Indian Railways.

Berger-Protecton has coated a large number of Rajdhani and other coaches in the last couple of years by adopting good painting practices as per international standards.

Berger Protecton has worked with the ICF from 2002 to 2004 being the change innovator and taking Epoxy PU coating systems trial orders for two Janshatabdi coaches that were field tested for 2 years observing and monitoring the performance. This documentation and excellent comparative performance over four other competitors paved the way to make it to the RDSO standards under the PPN series which is currently practiced for all new coaches and maintenance coaches painting.

The coating system currently used comes with **low VOC** which helped Railways to reduce the impact of solvent on the environment.

It is also a great pride to state that we are the first to introduce Fluoropolymer coatings on FIAT Bogie of VANDE BHARAT as per JIS Japanese technology with the approval of RDSO (Research Designs & Standards Organisation) to provide excellent corrosion and weather resistance.

Kudos to Team PROTECTON !!
